Edge Intelligent Perception Agents for Smart City Field Application
AuMac, A Multitask Robot for children and security surveillance

viswanath b

CTO at Hivebotics | Robotics & AI-Driven Software for Smart Facilities
Singapore, Singapore

Summary

CTO at Hivebotics | Robotics & AI-Driven Software for Smart Facilities.A strategic technology leader with over 13 years of experience in robotics and intelligent systems. Passionate about building, architecting, and scaling automated solutions that solve real-world challenges. Skilled in translating complex problems into impactful products, managing cross-functional teams, and aligning technology with business goals.Core Expertise· Autonomous Navigation & Mobile Robotics: Specialized in UAV/UGV systems, SLAM, path planning, and perception for challenging environments (mining, industrial facilities, logistics).· Full-Stack Robotic Development: From sensor integration and obstacle avoidance to fleet management and human-machine interaction.· Software for Facility Automation: Now leading the development of AI-driven software solutions that bring robotic intelligence to facility management—making buildings safer, more efficient, and autonomous.· Leadership & Strategy: Experienced in project risk assessment, client engagement, and guiding teams from R&D to deployed industrial applications.Current FocusAt Hivebotics, I oversee technology strategy and product development, building scalable software that transforms how facilities are monitored, managed, and automated.

Experience

Hivebotics
Chief Technology Officer
December 2025 - Present (11 months)
Singapore, Singapore

Vorwerk Group
Navigation specialist, Senior Robotics Software Engineer
May 2023 - December 2025 (2 years 8 months)
Shanghai, China

1. Algorithm Development: Design and develop advanced algorithms for navigation, obstacle avoidance, mapping, and path planning to ensure efficient and effective cleaning operations.

2. Software Architecture: Create and maintain the software architecture that integrates sensor data (such as lidar, cameras, or ultrasonic sensors) with control systems to enable precise and reliable cleaning actions.

3. System Integration: Collaborate with hardware engineers to integrate software components with the robot's hardware, ensuring seamless functionality and optimizing performance.

4. Testing and Validation: Conduct rigorous testing, simulation, and validation procedures to ensure the reliability, safety, and performance of the cleaning robot under various real-world conditions.

5. Lead a team of engineers, and contribute to the overall strategic planning and development roadmap for the cleaning robot software and latest feature implementation of hardware that improves perception capabilities of the robot .

Gaitech Robotics
8 years

R&D Manager, Lead Robotics Engineer
November 2020 - April 2023 (2 years 6 months)
Minhang District, Shanghai, China

1.Design strategies and propose solutions for the requirement from the market and develop products within the budget limit and delivering within time frame planning both short and long term.
2. Led geographically dispersed engineering teams—including robotics, application development, and project specialists—across four countries (Korea, China, the UAE, and Canada).
3. Project approvals and Successful planning and delivering complex autonomous robots for specific challenging applications.
4. Delivering to tight timescales and within budget.
5. Designing robot architecture, navigation stack developer and application designer

Project Manager, Lead Robotics Engineer
December 2017 - November 2020 (3 years)

1. Managing a team of engineer experts towards building mobile robots from indoor minimum-sized robots to outdoor medium-sized robots
2. Project planning and managing teams tasks execution within deadlines
3. Designing a robot's architecture and control lead. Reviewing and approving cost estimates and design calculations
4. working closely with mechanical design engineers and hardware engineers
5. Developing autonomous functionalities and navigation stack with additional plugins that perceive the environment for accurate localization especially on large space areas

Lead robotics Engineer
October 2015 - November 2017 (2 years 2 months)
Minhang District, Shanghai, China

1. Proposing and Leading projects with unique features
2. Robot architecture and control lead
3. Provide technical leadership and mentorship for junior team members
4. Developing educational robots and UAV with advanced applications based on CV
5. Developing SLAM, autonomous navigation with smart obstacle avoidance based on additional plugins developed to the navigation stack.

Robotics Engineer
May 2015 - September 2015 (5 months)
Shanghai City, China

1. Working with different types of advanced AGV and integrating them with external sensors and manipulators suitable for the required application.
2. Writing codes and developing ROS suite in letting robot perform actions autonomously.
3. Developing SLAM, navigation for autonomous functionality with smart obstacle avoidance

IIIT Hyderabad
Research Assistant
September 2014 - May 2015 (9 months)
Robotics Research Center, IIIT-HYD

Research Assistant in Robotics lab, IIIT-HYD.
Research and Developing applications based on CV, mobile robots, Human-Robot Interaction.
Code writing for autonomous functionalities and developing an algorithm for object detection based on CV (using the monocular camera) and visual-odom using stereo cameras

Vels University

1 year 2 months

Research Assistant

April 2014 - July 2014 (4 months)

Research Assistant in Robotics projects. Developing robotic prosthetic arm, implementation based on EEG signals

Project Engineer

June 2013 - April 2014 (11 months)

Design and programming a robot for children with multitask voice recognition, human-robot interaction, sound localization, omnidirectional and security surveillance by monitoring any where from the world using video transmission.

Education

VELS University

Master of Engineering (M.Eng.), Electrical, Electronics and Communications Engineering · (2012 - 2014)
