Robotics Developer Masterclass
ROS Development Program
Divide and Conquer, Sorting and Searching, and Randomized Algorithms
MATLAB Programming and Sensor Integration Workshop

Peera Tienthong

Robotics Engineer | System Integration Engineer | Autonomy Engineer | Autonomous Systems | Fleet Management Systems - Open-RMF
United States

Summary

Robotics engineer with 5+ years of developing automation and autonomous systems. Specialized in fleet management systems and task planning using Open-RMF and Behavior Trees, with proven track record of contributing to an open-source project and real-world deployments. My goal is to make robots accessible to people.

Experience

Hivebotics
Robotics Field Deployment Intern
December 2025 - Present (11 months)
Orlando, FL

Deploy, maintain, and optimize autonomous toilet-cleaning robots in public settings, improving efficiency and hygiene outcomes.

The Construct Robotics Institute
Robotics Software Developer
April 2025 - Present (1 year 7 months)

- Developed multi-robot navigation systems in Gazebo using ROS2 and Nav2 for an educational, real-robot system
- Developed pick-and-place tasks using C++, OpenCV, and ROS2, enabling high-level delivery task in Open-RMF
- Integrated navigation and control systems with Open-RMF using Python API and Zenoh for low-latency and scalability
- Improved localization accuracy by fusing wheel-odometry, lidar-based odometry, and AMCL, reducing localization error by 90%, particularly in real robots

Ekumen
Robotics Developer
April 2024 - July 2024 (4 months)

- Took ownership of an open-source project to integrate Open-RMF system with Andino robot in Gazebo, enabling Andino robot simulation capabilities
- Developed a custom fleet plugin in Python and ROS2 for integrating multi-robot system with Open-RMF
- Created documentation in GitHub for this open-source project, ensuring this project is accessible to audiences
- Presented this project in “Light Talk” panel discussion of the company, showing work to peers

Stevens Institute of Technology
Visiting Research Associate
September 2023 - April 2024 (8 months)
Wearable Robotic Systems Lab (www.wrslab.com)

- Developed innovative machine-learning classification models for wearable-based human activity recognition
- Data analysis of real-life data from ten participants using a novel monitoring protocol
- Acquired Summer Research award, a recognition given to the top three research fellows in a class of 30 students after presentation

Stevens Institute of Technology
Graduate Research Student
June 2022 - December 2022 (7 months)
Vibration and Acoustics Engineering Laboratory (www.vaelab.com)

- Modeled a conceptual design for wave propagation in piezoelectric materials, achieving asymmetric wave propagation in a directional-controlled manner
- Simulated model in MATLAB, confirming wave dispersion property and non-reciprocal wave propagation in both time and frequency domains
- Compiled a comprehensive final report to demonstrate mathematical models, codes, and non-reciprocity of piezoelectric metamaterials with non-local feedback

gerenga Group
Robotics Application Engineer
October 2017 - December 2021 (4 years 3 months)
Bangkok Metropolitan Area

- Integrated Universal Robots with Siemens S7 PLC and automation systems for various industries
- Integrated Universal Robots with NI vision system for an HVAC manufacturer

- Developed UR program using UR script language and designed robot systems in RoboDK simulation
- Developed out-of-the-box robotics applications such as robot soldering, machine tending, and packaging for fast deployment
- Supported on-site customer for Universal Robots training and maintenance service for automation systems

Chulalongkorn University
Undergraduate Senior Project
September 2016 - May 2017 (9 months)
Bangkok, Bangkok City, Thailand

- Prototype Ultra-Wideband(UWB) Frequency Sensor for Local Positioning System

Education

Stevens Institute of Technology
Master of Engineering - MEng, Mechatronics, Robotics, and Automation Engineering · (February 2021 - August 2023)

The Construct Robotics Institute
Robotics Developer, Robotics Software Development · (March 2023 - February 2024)

Chulalongkorn University
Bachelor of Engineering - BE, Mechanical Engineering · (May 2014 - October 2017)

University of the Cumberlands
Master's degree, Computer Science · (August 2024 - May 2026)

University of the Cumberlands
Master's degree, Computer Science · (August 2024 - May 2026)
